Apple, in evidence

Analysis date: 2024-12-31 (end of day) | Published fiscal years: 2023, 2024 | USD millions

An educational review of published financials and explicit valuation assumptions. No investment recommendation.

01 / Published financial record

USD millions	FY2023	FY2024
Revenue	383,285	391,035
Operating income	114,301	123,216
Operating cash flow	110,543	118,254
Capital expenditure (cash outflow)	10,959	9,447
Depreciation & amortization	11,519	11,445
Cash & equivalents	29,965	29,943
Operating margin	29.82%	31.51%

Revenue changed by 7,750 (2.02%). Operating margin moved from 29.82% to 31.51%, a change of 1.69 percentage points. These are server-calculated ratios.

02 / Documented risk context

Apple discloses reliance on outsourcing partners and concentrated supply chains, including manufacturing in Asia. Component availability, production disruptions and geopolitical restrictions can affect its ability to supply products. See Apple FY2024 Form 10-K, Item 1A, operational and supply-chain risk factors. This paragraph is an editorial source summary, not a live model response.

Historical periods use only their original pinned annual filings. Apple FY2023 contains 53 weeks; FY2024 contains 52 weeks. Apple's services mix differs from Dell's infrastructure exposure and HP's printing business. Financial comparability is limited.

Peers & source discipline

03 / Operating comparison

Company	Year end	Revenue	Growth	Op. margin	CFO/rev.
AAPL	2024-09-28	391,035	2.0%	31.5%	30.2%
DELL	2024-02-02	88,425	-13.6%	5.9%	9.8%
HPQ	2024-10-31	53,559	-0.3%	7.1%	7.0%

These are operating comparisons, with different fiscal calendars and product mixes. No market prices, trading multiples or implied upside are used. Dell FY2023 includes 53 weeks and its FY2024 includes 52. CFO less capex, when shown in the application, is a cash-flow proxy and is not labeled FCFF.

Evidence and interpretation

The application exposes passage identifiers, source context and tool traces. Citation existence is validated automatically; claim support still requires independent review. Live model outputs are excluded from this note so changes to valuation inputs cannot retain stale model commentary. The source manifest records full document hashes and retrieval dates. No full report or model weights are distributed.

Valuation, by assumption

05 / Five-year FCFF scenario

Enterprise value: **1,468,127 USD million**. Terminal value contributes 72.6% of enterprise value. This is a scenario output, not a price target.

Input	Scenario assumption
Base revenue (published)	391,035
Revenue growth, years 1-5	4.0%, 4.0%, 4.0%, 4.0%, 4.0%
Operating margin / operating tax	30.0% / 21.0%
D&A / capex / operating NWC, % revenue	3.0% / 3.0% / 2.0%
Discount rate / terminal growth	9.0% / 2.0%

Forecast year	Revenue	EBIT	FCFF	PV of FCFF
1	406,676	122,003	96,069	88,137
2	422,943	126,883	99,912	84,094
3	439,861	131,958	103,909	80,237
4	457,456	137,237	108,065	76,556
5	475,754	142,726	112,388	73,044

06 / Sensitivity of enterprise value (USD millions)

Discount / terminal g	1.0%	2.0%	3.0%
7.0%	1,776,577	2,061,725	2,489,446
8.0%	1,519,316	1,715,410	1,989,941
9.0%	1,326,482	1,468,127	1,656,986
10.0%	1,176,594	1,282,735	1,419,202
11.0%	1,056,765	1,138,601	1,240,898

FCFF = EBIT - cash operating tax + D&A; - capex - change in operating NWC. Forecast assumptions are analyst inputs, not company guidance. Year-end discounting; no tax credit for losses; no loss carryforwards, leases, acquisitions or equity bridge. Terminal year-six cash flow is recomputed with terminal growth. Operating NWC is modeled as a revenue ratio, not inferred from total current assets less liabilities. The model is highly sensitive to terminal assumptions.
